
Knowledge base
declared DAG → FHIR Library / CQL
proxies Z, W → ValueSet (LOINC, SNOMED CT); restriction rationale → Evidence; recommender π → PlanDefinition
Records (FHIR extraction)
age, Z, W, treatment T, outcome Y; severity U absent
indication marker for the safety veto
Algorithm 1 (audit)
graph tests; first-stage F; bridges h, q; elicited γ̄, δ̄ vs reference γ*, δ*; verdict: proximal / proxy / inconclusive; V(π), subgroups
Audit card
CDS Hooks 2.0 response, numbers in card.extension; maps to HTI-1 source attributes, FDA/IMDRF/EU AI Act evidence; re-audit triggers
